INTRODUCTION

THIS catalog is intended to serve as an aid in detailing and we will appreciate its use as such by architects, decorators, wood-workers and others in the trade. As we are constantly adding new designs to our stock of models it is impossible to represent our complete line. If ornament required is not shown please write to us for further information.

We will make models of special design at reasonable cost, and will quote prices promptly on work of this character upon receipt of scale or detail drawing.

By the use of compo ornament a better effect can be produced on woodwork than by using inferior carving, as all ornament is sharp and clean-cut, and can be furnished in the natural grain and color of any wood.

On pages 4 to 17 we show a few capitals and brackets of the principal orders of architecture. We also have many other models of conventional design, of which we will submit photographs upon request.

Capitals are made in a fibrous composition for exterior, and in wood and compo for interior. Our exterior composition has successfully withstood all conditions of weather for many years.

In addition to the types of ornament shown in this catalog we manufacture Duretta, a fireproof fibrous composition that exactly reproduces plain and carved woodwork. It can be used as a substitute for wood in the decoration of fireproof buildings, and is suitable for plain and carved pannelling, mantels, grilles, frames, consoles, lighting fixtures, etc. We will furnish estimates according to your own designs, or will submit designs made up from our own models, among which are many fine examples of antique carvings. Sample sent upon request.

EXPLANATION AND INSTRUCTIONS

OF capitals shown, we carry in stock for immediate shipment, fibrous composition capitals in all sizes from six inch to twelve inch diameter. Orders for larger sizes will be filled promptly. Wood and composition caps up to six inches are kept in stock. As the body is made of wood, they can also be of any special height and diameter desired. In ordering capitals give number and size required and state whether for *Exterior* or *Interior* use.

DIAMETER of column should be taken where shown on figure A for Corinthian, Renaissance, Composite and other capitals with necking, and on figure B or C, whichever way neck of shaft is turned, for other capitals shown in catalogue.

WOOD DOWEL. Dotted lines indicate wood dowel or core which is to be used to carry the weight imposed on column. This should be made about $\frac{1}{2}$ in. longer than height of capitals. For capitals with 5 in. to 11 in. diameter neck, make dowel $1\frac{1}{2}$ in. smaller in diameter; 12 in. to 16 in. capitals $1\frac{3}{4}$ in. smaller, 17 in. to 24 in. capitals 2 in. and for 24 in. to 30 in. capitals $2\frac{1}{4}$ in.

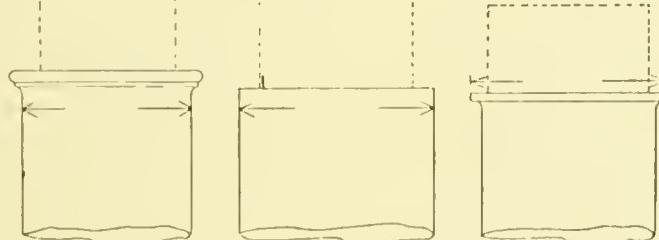

FIG. A

FIG. B

FIG. C

PILASTER capitals. Unless otherwise specified, pilaster capitals will be furnished with same shaft measurement as column capitals and returning one-half.

COVE MOLDING. All capitals are furnished *without* cove moulding.

Our compo mouldings and other compo ornament, shown on pages 17 to 130, are furnished in a pliable state and will stay so for some time if kept moist. It adheres firmly to wood work when properly applied. It should be well glued and nailed with brads. Particular attention is called to the condition of the wood. It must be *perfectly dry* and free from paint or stain, so that the pores may be open and allow the compo ornament a clean surface to adhere to. Compo can be furnished to match any wood finish. When applied on exterior, it should be backed up with a thick coat of white lead. Full directions for use with each order. Be sure to give page number when ordering.

We pack goods with the greatest care and cannot be responsible for breakage or loss in transit, our B/L being guarantee of good order when shipped, also that number of packages called for were forwarded. All shortage should be noted on freight bill and any damage or breakage noted by agent on the same, before payment is made. We will help customers sustain damage claims if fully informed as to the loss.

*Measurements given under "Face Width" denote width at highest and lowest part of face.

†Projection of Scroll of 7144, 13 $\frac{1}{4}$ in.; 7147, 3 $\frac{1}{8}$ in.; 7139, 2 in.

Measurements for brackets are taken on edge of abacus (the moulding at top) "projection" being the length as extending out from background applied to "abacus width" the width across the abacus, "drop" the height at end where applied to background, and "face width" the width across leaf and between outside edge of side scrolls, see sizes on page 16. Brackets and Corsoles on this page can be furnished in fibre composition or compo and wood. When in compo the dimensions can be varied. Be sure to give page number when ordering.
